| Caller Name | Suganya |
| Issue | Update Accused Age |
| Name of the Help Desk Resource | Pushparaj |
| Status | Completed |
| Resolution , Date and Time | 27-10-2025 |

- ## Steps to Update Accused Details (Age/Name) in the Local DB Server

Follow the steps below to update the accused's information in the **local database server**.

---

## Step 1: Open the Database

1. Connect to the **local DB server** using SQL Server Management Studio (SSMS) or your preferred SQL client.
2. Open a **new query window** for the relevant database.

---

## Step 2: Verify the Record

Execute the following query to check the existing details of the accused:

```
SELECT *
FROM t_fir_accused_info
WHERE FIR_REG_NUM = 26002027250005;
```

This will display all accused records linked to the given FIR number.

---

## Step 3: Update the Accused Name

Run the following query to update the accused's name:

```
UPDATE t_fir_accused_info
SET FIRST_NAME = 'RAM'
WHERE ACCUSED_SRNO = 26002027250005001;
```

This updates the **FIRST_NAME** field for the accused with the specified **ACCUSED_SRNO**.

---

## Step 4: Verify the Update

After updating, execute the following query to confirm the changes:

```
SELECT *
FROM t_fir_accused_info
WHERE FIR_REG_NUM = 26002027250005;
```

Check that the **FIRST_NAME** field now shows **‘RAM’** for the corresponding accused.

---

## Step 5: Confirmation

If the updated name appears correctly, it means:

 *Accused name has been updated successfully.*
