Adding New Section

Ticket Number	CCTNS 2500018
Date & Time of Call Received	07-05-2025
Name Of Police station	Food Cell PY
Caller Name	Ramu
Issue	Adding new Section
Name of the Help Desk Resource	Pushparaj
Status	Completed
Resolution , Date and Time	07-05-2025

1. Open SQL Server Management Studio (SSMS)

- Connect to the **DB Server** where the *cctns_state_db* database is hosted.

---

2. Run the First Query to Check Existing Section

- Execute the following query to verify if the section already exists:

```
SELECT *
FROM m_section
WHERE act_sec_cd = 60
  AND LANG_CD = 99;
```

- This checks whether a record with **act_sec_cd = 60** and **LANG_CD = 99** already exists.

---

3. Switch to the Correct Database

- Make sure you are using the database:

```
USE [cctns_state_db];
GO
```

---

4. Insert the New Section Record

- Run the INSERT query to add the new section in the table:

```
INSERT INTO [dbo].[m_section]
VALUES
-- (Insert the appropriate values here)
```

(Note: Replace the placeholder with the actual column values.)

---

5. Run the Second Query (If Provided Separately)

- Execute any follow-up query provided to verify or update related data.
- (You mentioned a second query—execute it at this stage.)

---

6. Re-run the First Query to Confirm Insertion

- Execute again:

```
SELECT *
FROM m_section
WHERE act_sec_cd = 60
  AND LANG_CD = 99;
```

- You should now see the newly inserted record.

---

7. Verify the Result

- Confirm that:
  - The new **Act** and **Section** values appear correctly.
  - The record has been inserted successfully into **m_section**.

---

8. Completion

- This confirms that the **new section was successfully added to the DB Server**.
