Minutes of Meeting (MOM)

Subject: Cybersecurity Discussion – (Preliminary | Startup)

Date: 14/11/2025

Venue: Cybersecurity - SDC Puducherry

Attendee's

Infrastructure	Centralized Team	Application
1. Prakash	1. Pavithran	1. Gokulakrishnan
2.Thiyagu	2. Sandeep	2. Jayasree k
3.Mugudan		3. Vignesh
		4. Pushparaj
		5. Chandru
		6. Ramkumar
		7.Sathiyanarayana

Key Discussions

- Implementation of a mechanism where, when a user inserts a LAN cable, the system should display a login page**.**
- Internet access should be allowed only if the user enters correct credentials.
- If credentials are incorrect, the user should not be allowed to use the internet.
- After successful login, the system should **automatically scan**:
  - Whether an antivirus is installed.
  - If installed, check its validity (active / due / expired) and record the status.
  - If no antivirus is found, **Windows Defender must be active**.
- Team members suggested connecting all systems to an **AD server**, which is possible within **PSWAN** networks (not public networks).
- As an alternative, a **script-based method** can be used for personal and admin systems.

All Members

All team members participated and contributed suggestions regarding LAN-based authentication, antivirus verification, and AD server feasibility.

Summary

The team discussed implementing a LAN cable–triggered login system with conditional internet access, followed by an automatic security scan. AD-based management was

recommended for PSWAN-connected systems, with script-based solutions as an alternative. All members agreed to evaluate the best feasible approach.

Notes: Cybersecurity team meetings are held every Friday at 12 PM, and if not conducted on Friday, they are held the next day.
